Notes on Lectures, Fall 2026

10/30/2026

1 1

The paper is asking how AI is helping insurance companies, using natural language processing to read job postings and identify how much firms are hiring people who use AI. Main takeaway is that it seems to impact underwriting and claims (in terms of saving time) but perhaps not at the firm level.

Separate takeaway: try separating state-level data by amount of premium as well as population!
